

Digitize, centralize, and standardize your raw material compliance processes and documentation with Vitature™—cloud-based software for manufacturers and suppliers.

For dietary supplement manufacturers, the process of managing raw material compliance requirements is complex and inefficient. Data and documentation required for formulation and label claim substantiation is often captured in multiple spreadsheets, making it difficult for internal teams to collaborate, approve specifications, and get finished products to market quickly.

Vitature is a cloud-based, highly configurable tool with everything you need to ensure your product's labels are accurate and compliant. Create material specifications, qualify vendor materials, and manage required regulatory documentation in one place.

Speed Time-to-Market

- Identify and qualify the right supply chain partners and quality ingredient sources via automated templates which contain supplier material specification and qualification information.
- Build raw material specifications faster by leveraging the Smart Ingredient Taxonomy in Vitature, which contains over 15,000 ingredients identified from supplement product labels in market. Regulatory notices, drug/supplement interactions, side effects, and safety warnings are available by ingredient as well.
- Research and link science to formulations using the Vitature Science Database which includes over 300,000 studies. Create new claims as part of the formulation workflow, or, add your own product portfolio claims and studies to the database.

Quotes from some companies we talked to

"We have a lot of **quality people** doing **clerical work**"

"We already have **seven people managing material documentation** and we can't keep up."

"Every department has some of the material documentation . . . **Nothing is in one location.**"

"I **don't have the budget to hire** more people to manage our materials in R&D."

Reduce Regulatory Risk

- Get dashboard visibility of all raw material projects with statuses and notifications.
- Be alerted to key expiration dates related to materials and documentation, ensuring seamless compliance with federal regulations.
- Create bulk formulas and see all raw materials associated with them to substantiate label claims, determine formulation changes, and view how new materials might affect your finished product.

Increase Efficiency

- Find complete materials and materials in process and see what needs approval and what information is still outstanding.
- Digitize and standardize all raw material management data and documentation in one place, accessible from anywhere.
- Automate the supplier and material qualification process.

Vitature Solution

- Centralizes all raw material data and documentation in one cloud-based platform.
- Reduces reliance on spreadsheets.
- Lowers costs associated with managing multiple tools.
- Supports documentation requirements for regulatory audits.
- Ensures transparency about what's in the bottle from seed to shelf.
- Supports centralized workflow for team collaboration.
- Comes pre-loaded with the Vitature Smart Ingredient Taxonomy and the Vitature Science Database with supporting regulatory information.
- Empowers customers with full documentation on your material compliance.

Material Management Capabilities

Vitature is the one platform your research and development, quality assurance, regulatory, procurement, marketing, and product management teams need during the product development process. Use Vitature to create raw material specifications, find and qualify supplier materials, research and substantiate label claims, build bulk formulas, and manage associated data, documentation, and approvals. Vitature comes pre-loaded with the Vitature Smart Ingredient Taxonomy, allowing each ingredient to have relationships with many datasets, such as regulatory statuses, scientific studies, and material supplier data. All material specification data and documentation can be exported to Excel or PDF to share with customers or vendors.
