

Vitature[®] Simplifies Supplier Qualification and the Management of Data and Documentation.

Vitature[®] is the cloud-based solution that digitizes, standardizes, and centralizes the data, documentation, and processes required for regulatory compliance. Dietary supplement manufacturers and raw material suppliers use Vitature to increase transparency and compliance, bring products to market faster, and eliminate time-consuming data entry processes and multiple data repositories.

Raw Material Management Capabilities

Leverage Vitature to research and build raw material specifications, qualify suppliers and their products against those specifications, manage expiring compliance documentation, build bulk formulas, and substantiate label claims.

Data entry and low-value tasks take up **86%** of the time for high-value people.

Digitization and automation reduce time spent on low-value tasks like manual data entry.

Most businesses don't know how many of their ingredients are non-compliant at any given time.

Real-time reports aid business-critical decisions and help you understand audit risk.

On average, businesses use **4–5** different tools to see all associated data and documentation for *one* ingredient.

Single source of truth for all compliance data and documentation, accessible across teams—no more multiple shared folders or spreadsheets.

Reduce Regulatory Risk

- Dashboard visibility of all raw material projects with statuses and notifications.
- Maintain Part 11 compliance with electronic signatures, digital audit trails, and expiration tracking.
- Build bulk formulas and see all raw materials associated with them to substantiate label claims, and to determine formulation changes and how new materials might affect a product.

Increase Efficiency

- Find finished raw materials and those in process and see what needs approval and what is still outstanding.
- Automate the supplier and material qualification processes.

Speed Time-to-Market

- Identify and qualify supply chain partners and ingredient sources via material specification templates, built with guidance from the SIDI (Standardized Information on Dietary Ingredients) Work Group.
- Leverage the Smart Ingredient Taxonomy to create material specifications; it contains over 19,000 ingredients identified from various sources, including supplement labels and MeSH taxonomy. Regulatory notices, legal statuses, known side effects, and potential interactions are also available.
- Build structure/function claims using the Vitature Science Database which includes over 300,000 citations curated by subject matter experts.

What Companies Are Saying:

“We have a lot of **quality people** doing **clerical work**.”

“We already have **seven people managing compliance documentation** and we can't keep up.”

“Every department has some of the material documentation . . . **Nothing is in one location**.”

“**I don't have the budget to hire more people to manage our raw materials in R&D**.”
